## Password Solutions

for **MANAGED  
WORKPLACE<sup>®</sup>  
2012**

At Scorpion Software, we solve the obvious problems with passwords that others ignore. Like trying to remember and share dozens or hundreds of different passwords with different people. Or tracking what passwords someone actually knows now, or in the past. Or auditing what they could access on premise, or in the cloud. Like trying to make sure that those connecting are actually who they say they are. We can even make it possible to securely access systems without needing to know the password in the first place.

Scorpion Software takes these problems very seriously and has created solutions to address the issues. AuthAnvil is three products that compliment each other and work together seamlessly; the Password Vault, Two Factor Auth and Single Sign On. We eliminate the worry and minimize the risk of access and control of your sensitive systems and data for your small to mid-sized business.

**Strong  
Authentication**

**Single  
Sign On**

**Password  
Management**

Thousands of IT Service Providers and IT departments worldwide depend on us every single day to help safeguard their information systems with our password management and strong authentication solutions. If you are using Level Platforms, we can help you too.

# AuthAnvil Solutions fully integrate with Level Platforms Managed Workplace:

## Two Factor Authentication

### Protect the Managed Workplace Logon.

Traditional passwords are far too easy to share, steal or break. When there are times where you need higher levels of confidence that the people logging in to *Level Platforms Managed Workplace* are actually who they say they are, you should be looking at the identity assurance protection offered by *AuthAnvil Two Factor Auth*.

Through two-factor authentication, a combination of a PIN that only you know along with a one-time password that only you have from your AuthAnvil token gives you a unique passcode that can never be reused twice, and is almost impossible to duplicate or forge.

## Single Sign On

### Access Managed Workplace with a Click.

Now you can give access to *Level Platforms Managed Workplace* without even having to provide a password in the first place. With *AuthAnvil Single Sign On*, simply sign in with your AuthAnvil passcode and gain access to the Single Sign On Portal. Now you can access *Managed Workplace* and all your other systems and services that support federated single sign on with a single click. You can also gain access to everything from *Salesforce* to *Google Apps* and even other AuthAnvil products too!

## Password Management

### Store all of your Passwords Securely.

The *AuthAnvil Password Vault* allows you to centrally organize, share, synchronize and audit all your important passwords within your organization, and the organizations you may work with. Access your passwords securely from almost anywhere on almost any device, both on-premise and in the cloud.
